

**Customer:** Rock Roofing Ltd.

**Site:** The Dice Luxury Apartments - UK

**Date:** November 2019

***'First time we had contracted to them and they loved the systems speed!'***

We have had some excellent customer satisfaction feedback using Centrix. On our first contract using your system with St. Modwen Homes we won their contractor of the month award. The award was due to a rapid clean install which allowed following trades to start early.

Please see some bullet points on our experience with your Centrix system:

- Less reliant on weather conditions than when using solvent welded disc system.
- Opportunity to use wider module of rolls when wind calcs for lap fixing would dictate using 1 meter roll widths. This can half the amount of lap welding and considerably reduce install time.
- Robust discs which are nearly impossible to distort from being over-tightened practically with new or less experienced fixers.
- Removes the possibility of a non-compliant weld.
- Less fixings per m<sup>2</sup> compared to other fixing methods allowing quicker install.
- Only one installer required to lay field roof area at speed, approx. 500m<sup>2</sup> per day.
- Can use inexperienced labour to weld the roof membrane to the disc system. This omits the need for a higher number of experienced operatives to install a whole roofing system within programme.
- Cost savings and speed have been extremely advantageous in being awarded projects over our competitors.

Regards,

Carl Pryce,  
Contracts Director
